

Nine materials present in ecalgeo.g21

h5009 N geantinos ALUMINIUM

h5015 N geantinos AIR

h5022 N geantinos POLYSTYREN

h5026 N geantinos ECAL_PVC

h5027 N geantinos ECAL_PBALLOY

h5028 N geantinos ECAL_STEEL

h5032 N geantinos ECAL_SCINT

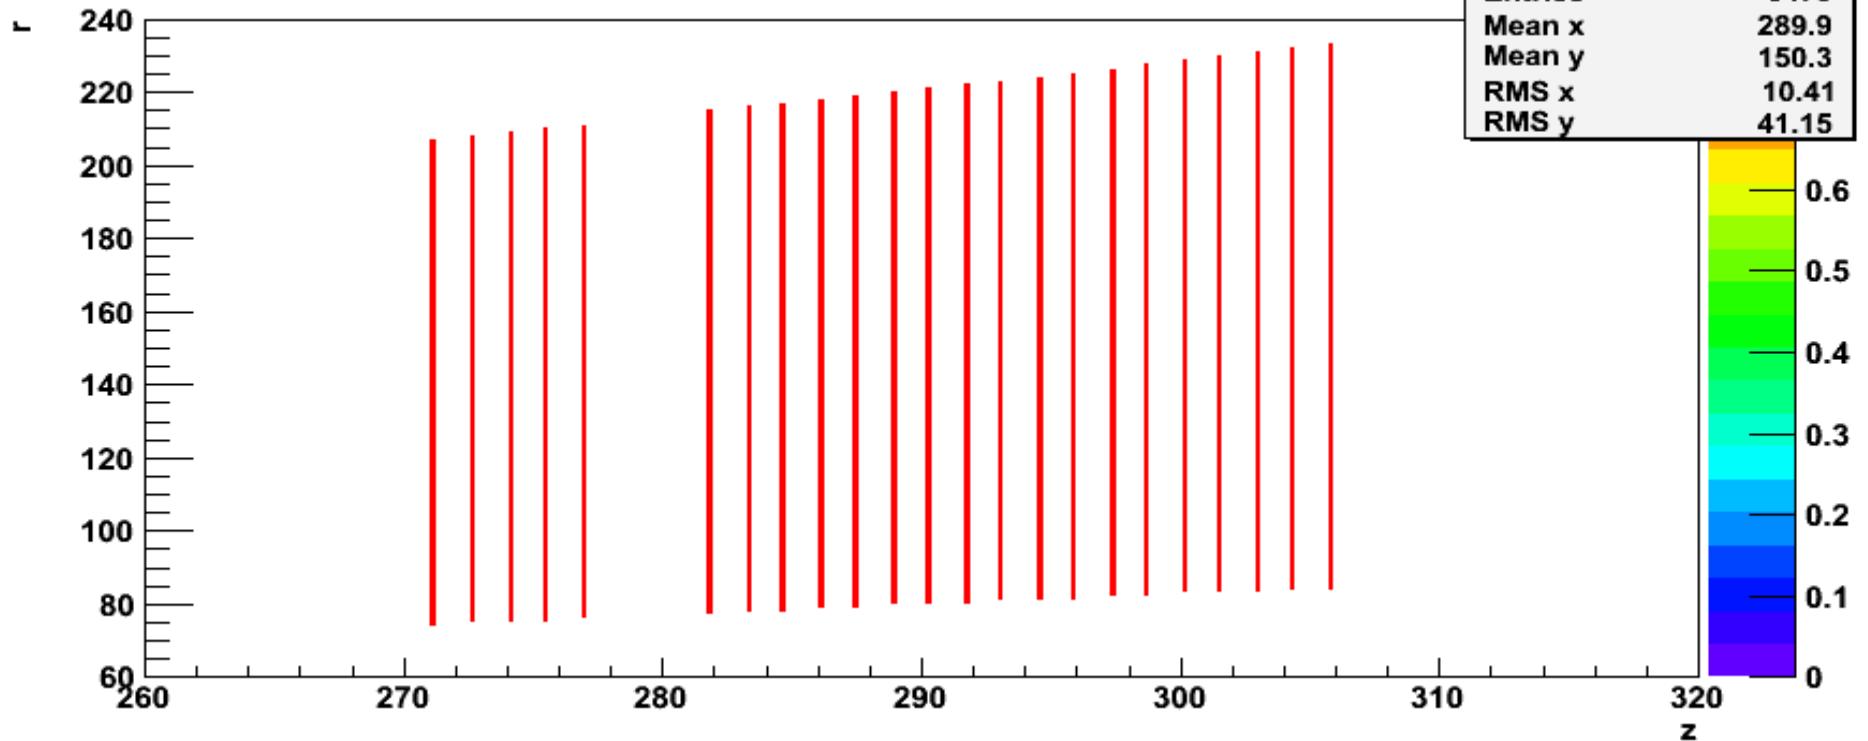

h5033 N geantinos ECAL_EBLS

h5034 N geantinos ECAL_EFLS

Method:

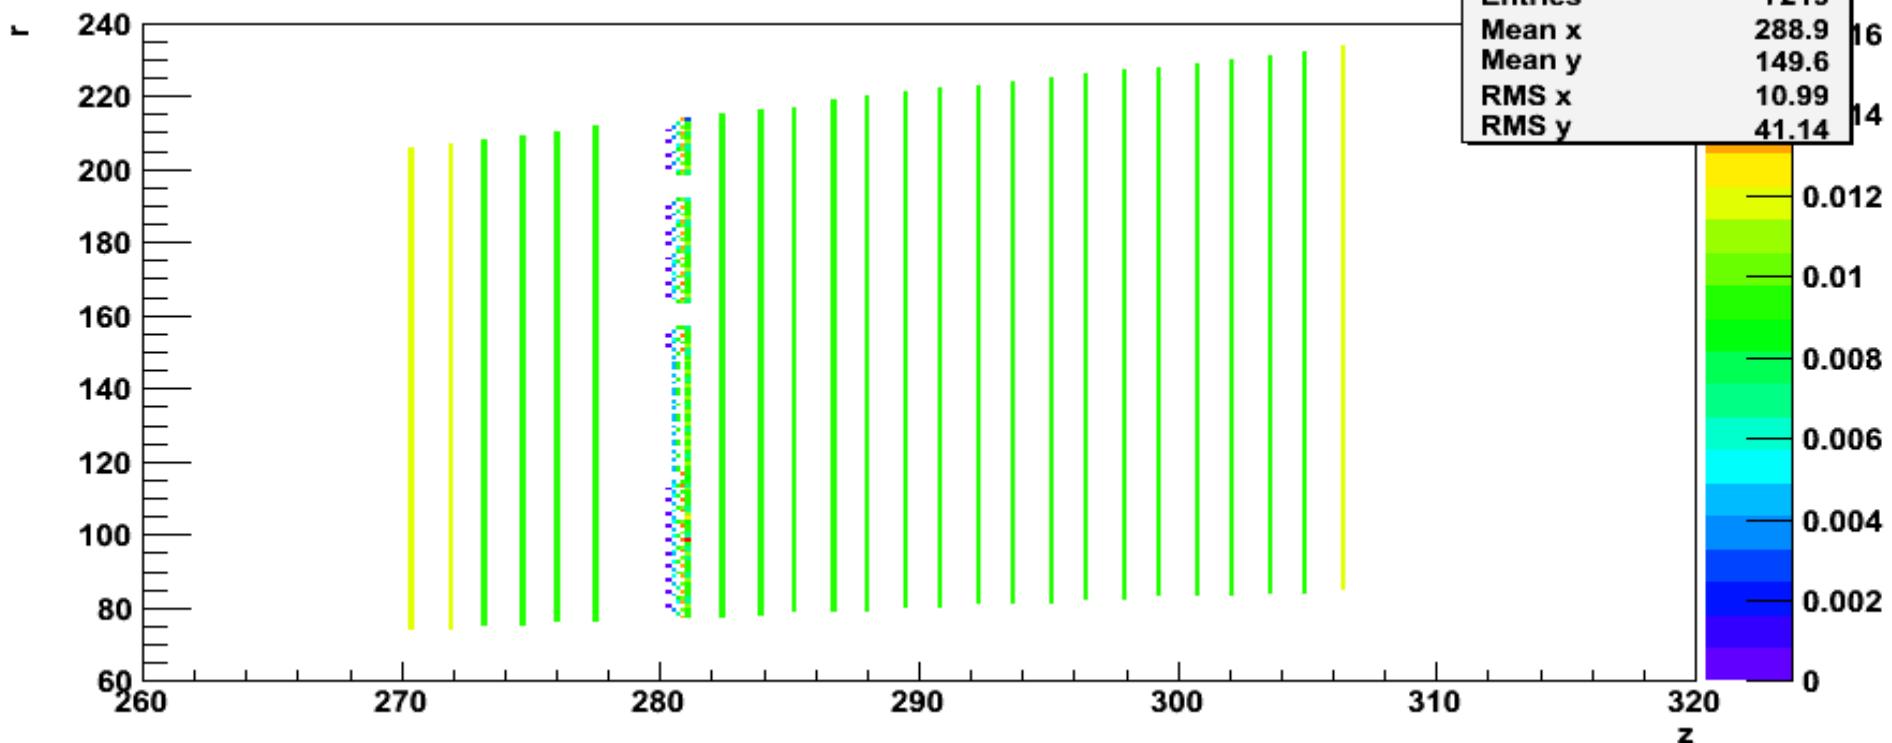

- 1) Throw geantinos normal to front face of the EEMC
- 2) phi = 105 degrees (boundary between sector 12 and sector 11)
- 3) Step vertex from r = 0.5 to r = 249.5 in 1cm steps
- 4) Determine number of radiation lengths of material in each track step
- 5) Store number of radiation lengths in a 2D histogram, at given r,z
- 6) Store number of geantinos crossing, etc...

Material ECAL_PBALLOY in rad.len

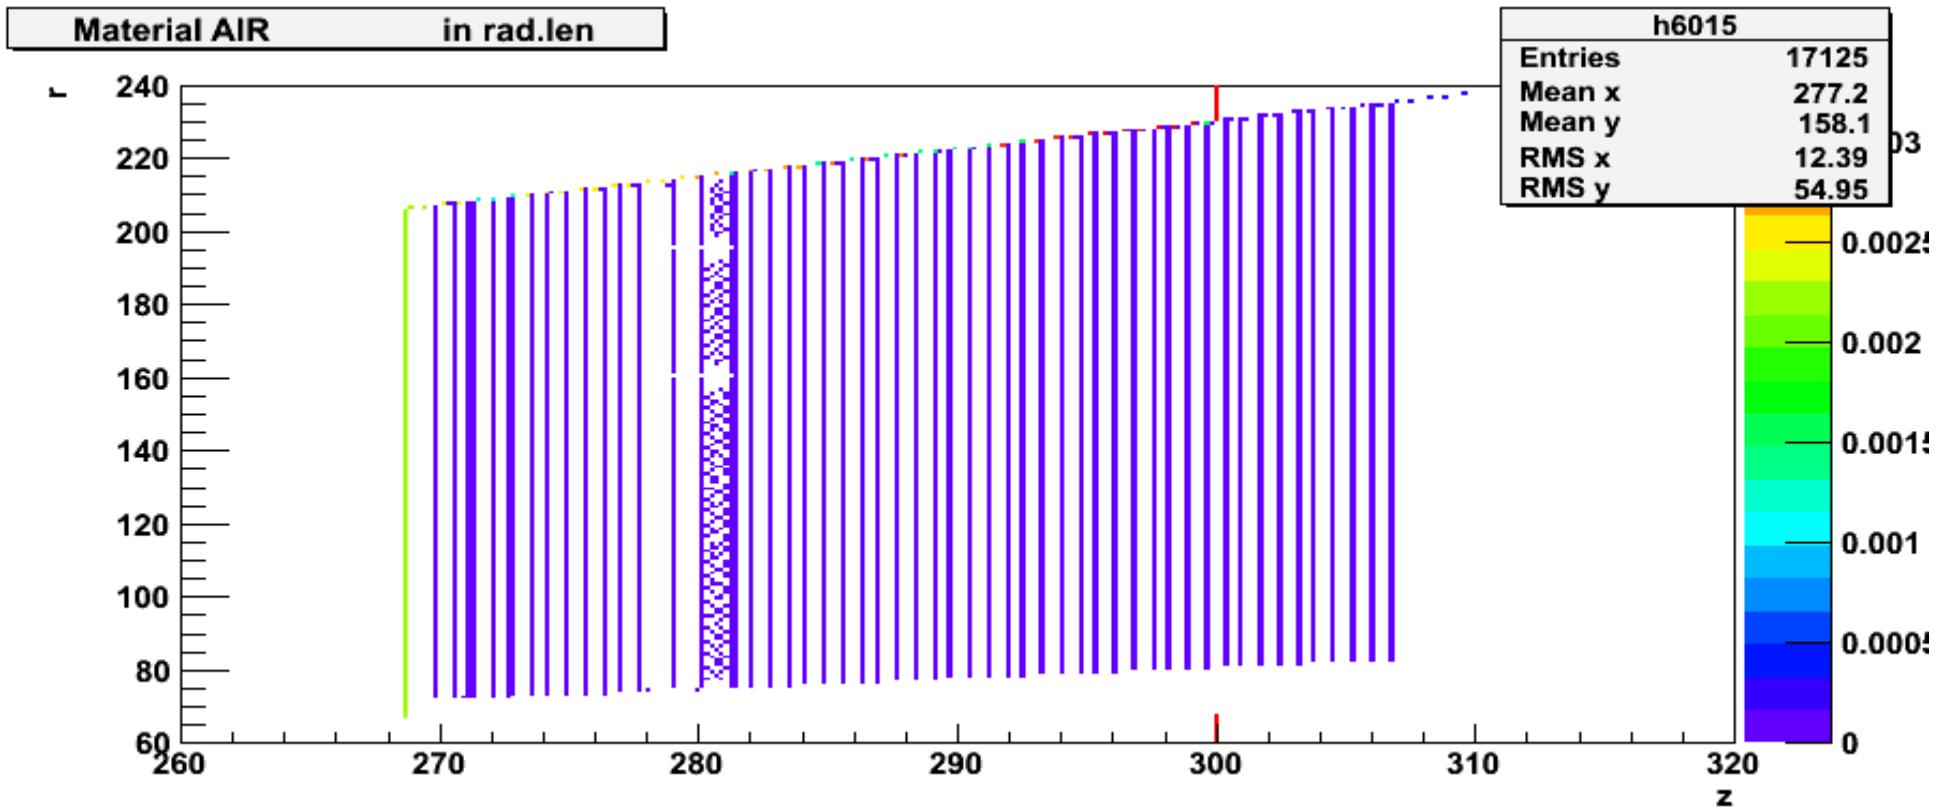

- 1) All 23 lead radiators show up.
- 2) Expect 0.8 radiation lengths
- 3) See 0.8 radiation lengths for each radiator

Material ECAL_SCINT in rad.len

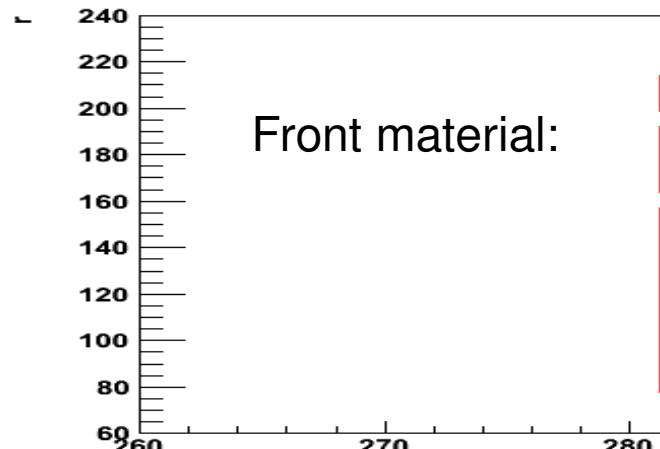

- 1) See all 24 megatiles with ECAL_SCINT as material
- 2) **See one SMD planes, EXPECT 2**
(at least we see the notches)
- 3) See correct ratio between preshower and normal tiles
- 4) Expect and see 0.012 radiation lengths for preshower tiles. Expect 7/5 larger for geantinos passing through 0.7 cm apex-to-base in SMD. Peak rad. len. is about 1.68 as expected.
- 5) Postshower shows correct number of radiation lengths.

- 1) Air is air
- 2) Air is missing from the spacer layer
- 3) Looks like there are small airgaps between each SMD strip. Also may be some air in places where front/back plastic should be in the SMD plane... Not clear why, because....

Material ECAL_EFLS in rad.len

Front material:

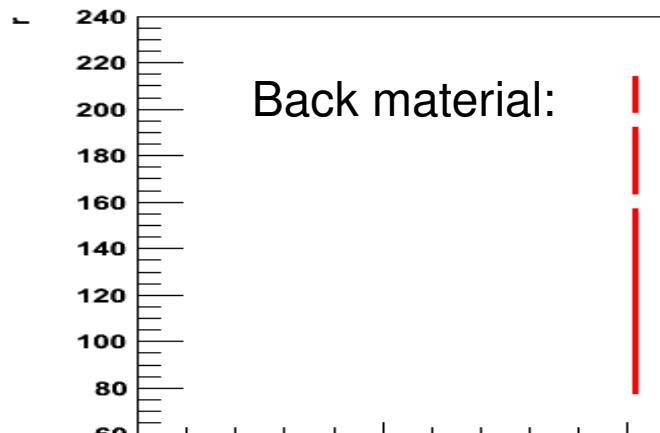

h6034

Material POLYSTYREN in rad.len

h6022	
Entries	13677
Mean x	289.8
Mean y	148.3
RMS x	10.93
RMS y	44.73

- 1) Polystyrene layers (i.e. fiber router in each megatile)
- 2) Should be uniform layer to layer.
- 3) Non uniformity due to fraction-of-1-mm shifts to align megatiles and radiators with as-built values.

- 1) Steel cladding shows up around each radiator (23 pairs)
- 2) Scale is misleading here... zooming in on the histogram shows
cladding is ~0.03 radiation lengths, in line with value expected
for 0.5mm of steel
- 3) Back plate shows up, expect and see 1.8 radiation lengths for
3.175 cm of Aluminum (aluminium if you prefer...)

Material ALUMINIUM in rad.len

h6009	
Entries	7031
Mean x	276.3
Mean y	141.7
RMS x	11.26
RMS y	40.85
